Welcome to the New Virtual Machine Wizard

A virtual machine is like a physical computer; it needs an operating system. How will you install the guest operating system?

Install from:

☐ Installer disc:

DVD RW Drive (D:)

☒ Installer disc image file (iso):

C:\Users\prlab\Desktop\XenServer-7.0.0-install-cd.iso

Browse...

⚠

 Could not detect which operating system is in this disc image. You will need to specify which operating system will be installed.

☐ I will install the operating system later.

The virtual machine will be created with a blank hard disk.

Select a Guest Operating System

Which operating system will be installed on this virtual machine?

Guest operating system

☒ Microsoft Windows

☐ Linux

☐ Other

Version

Windows 10 x64

New Virtual Machine Wizard

Specify Disk Capacity

How large do you want this disk to be?

The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.

Maximum disk size (GB):

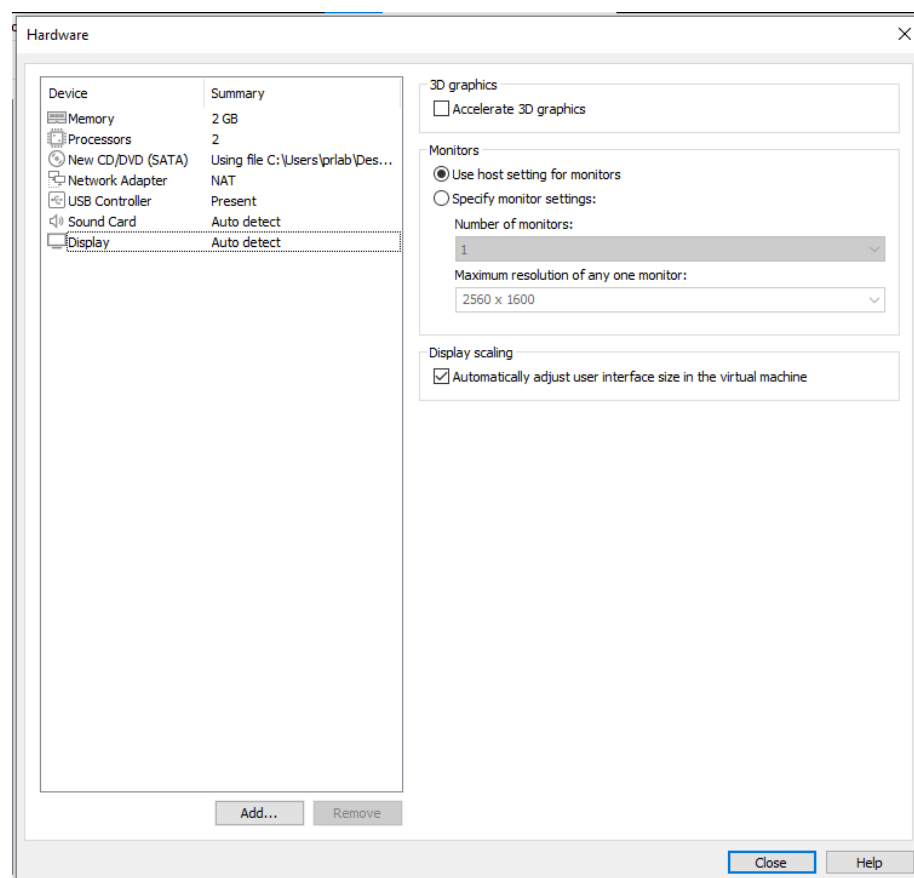

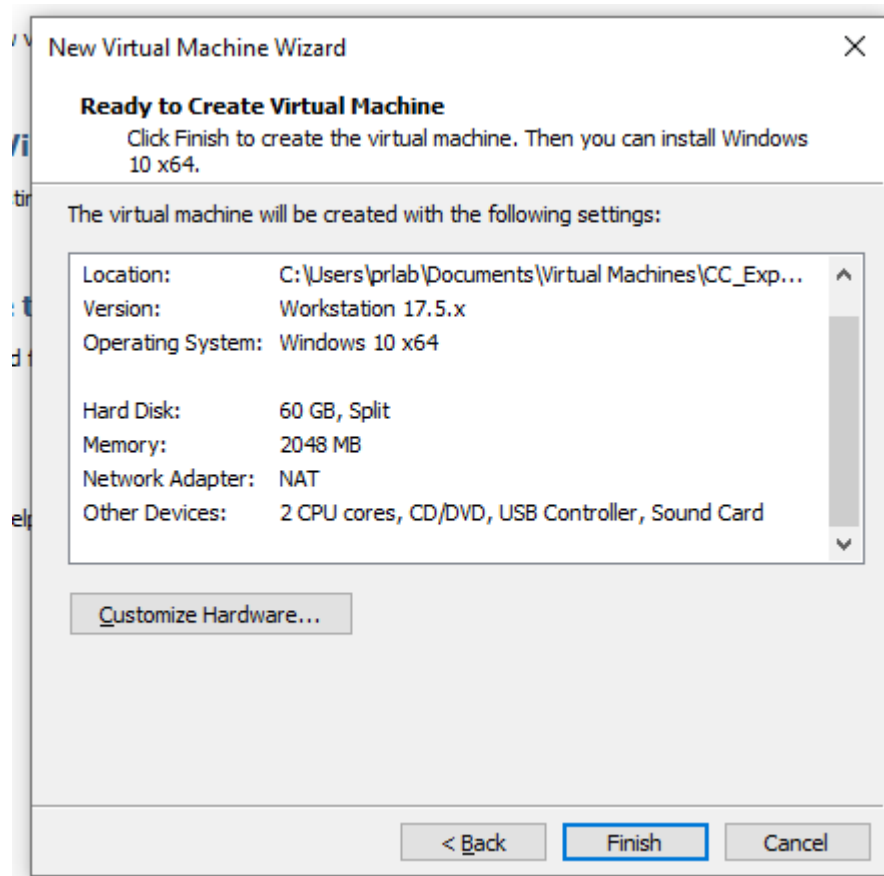

Recommended size for Windows 10 x64: 60 GB

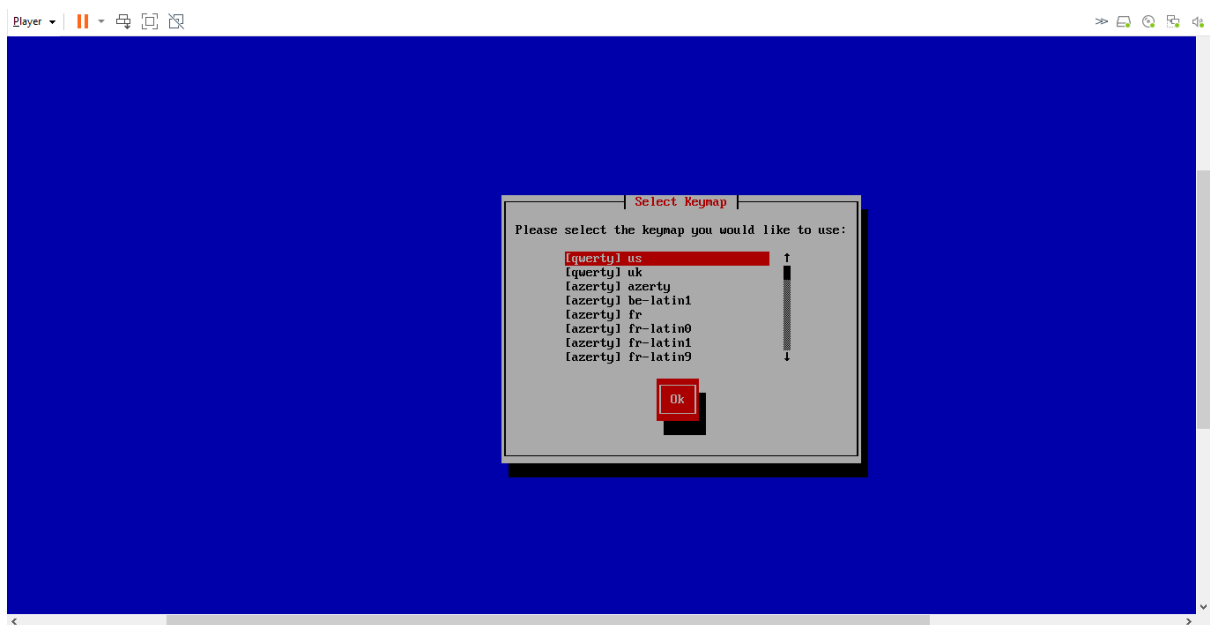

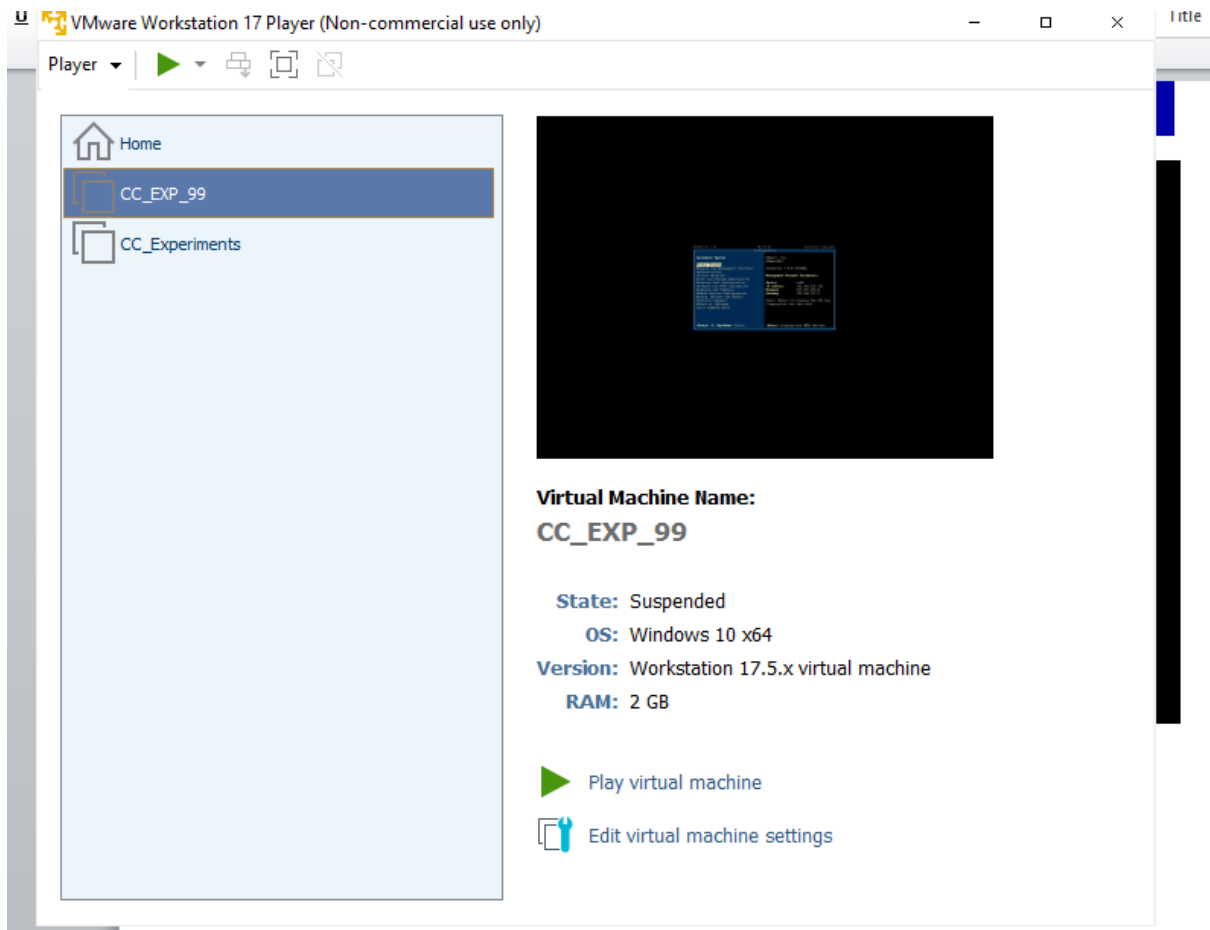

☐ Store virtual disk as a single file

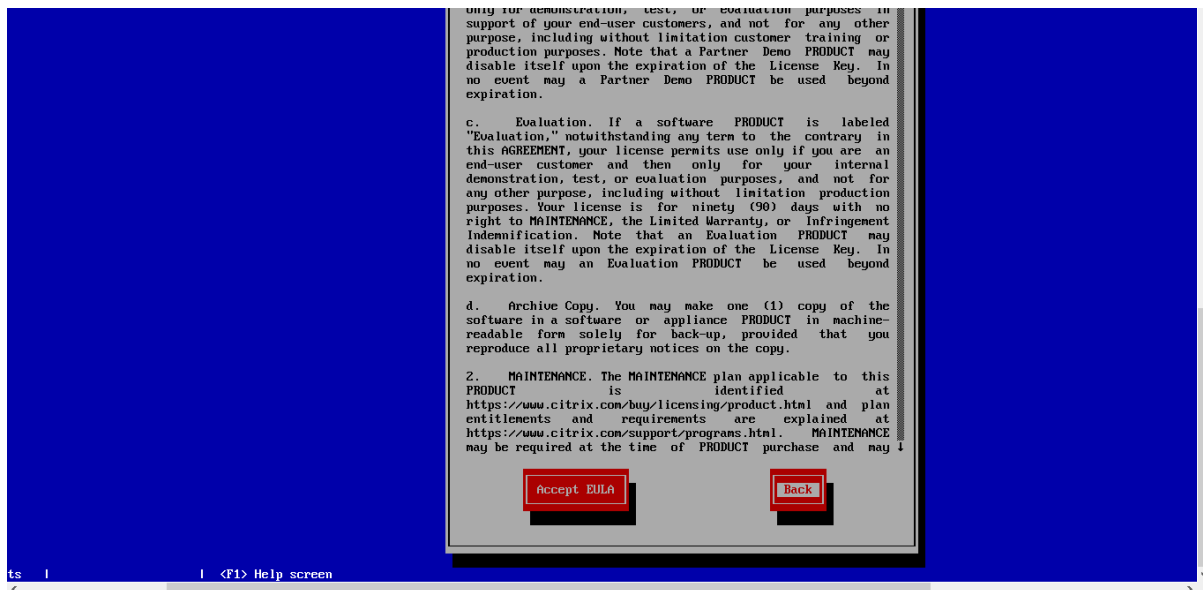

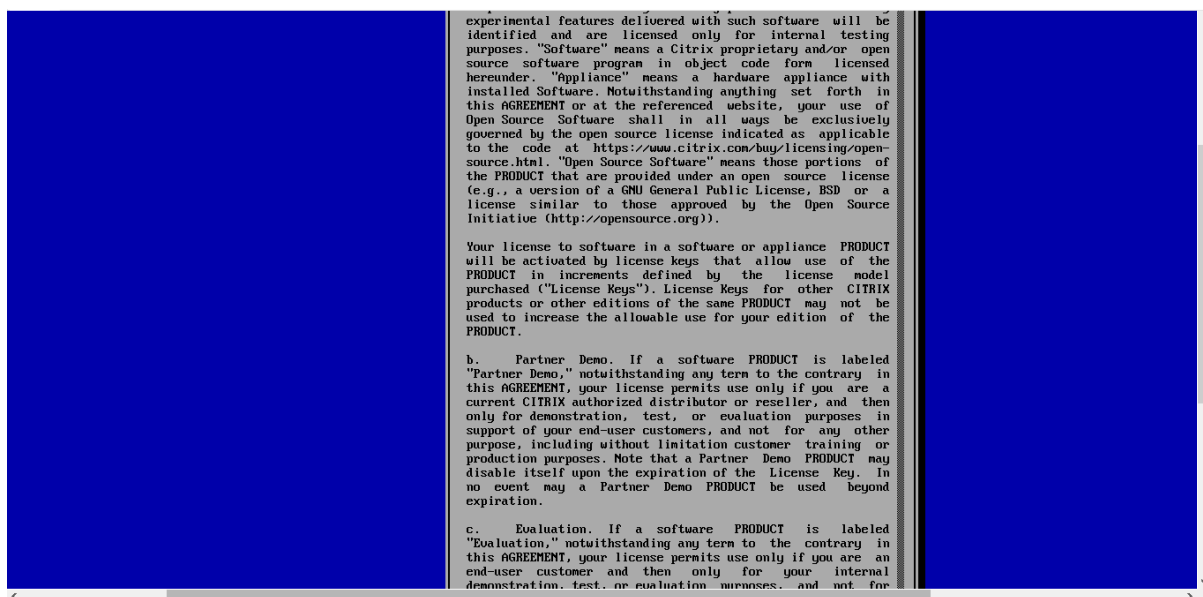

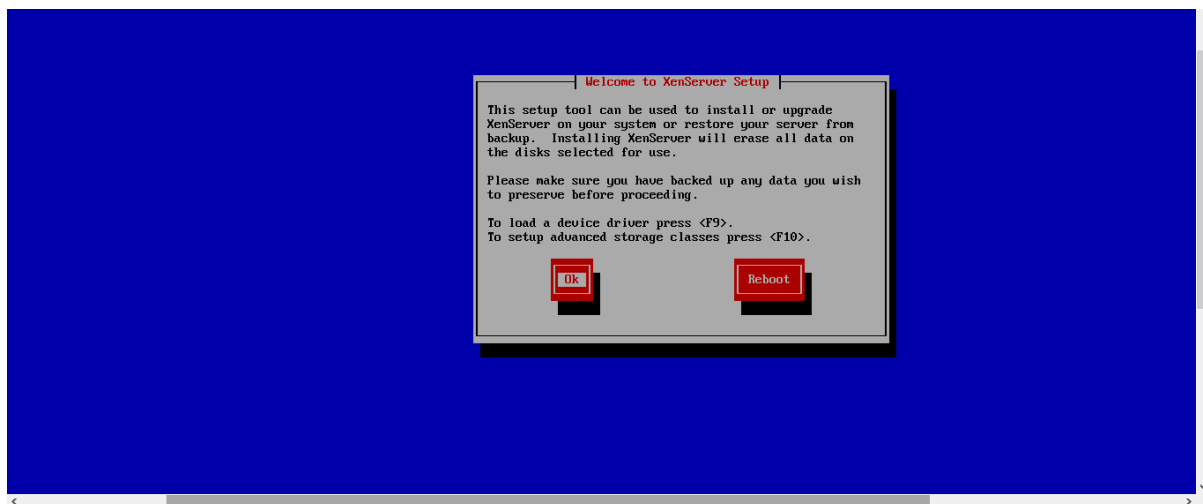

☒ Split virtual disk into multiple files

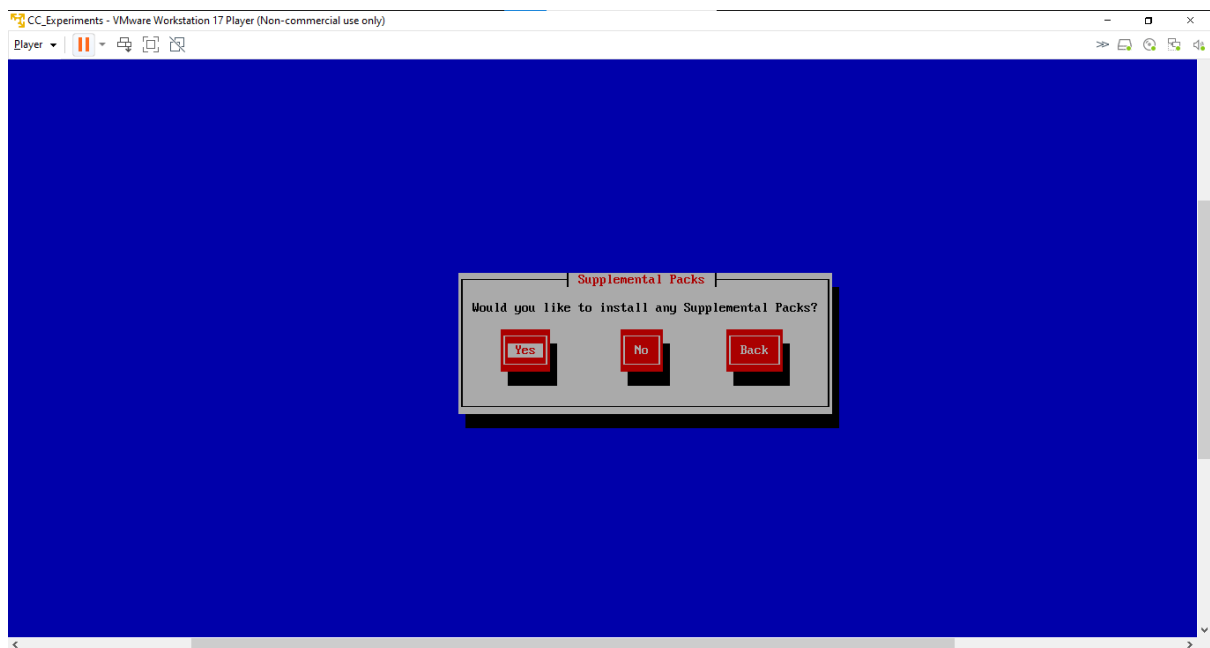

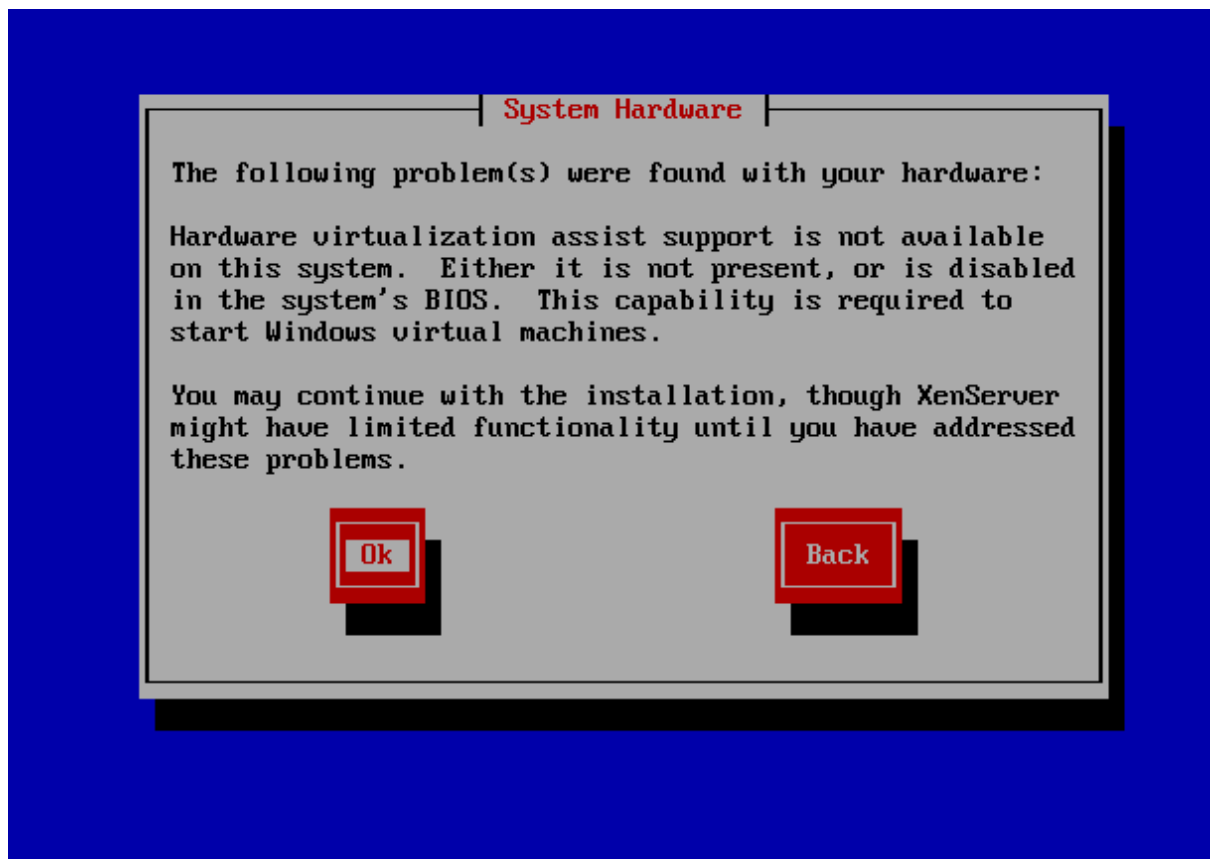

Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.

Set Password

Please specify a password of at least 6 characters for the root account.

(This is the password used when connecting to the XenServer Host from XenCenter.)

Password

Confirm

Ok

Back

Networking

Please specify how networking should be configured for the management interface on this host.

☒ Automatic configuration (DHCP)

☐ Static configuration:

IP Address:

Subnet mask:

Gateway:

Ok

Back

Hostname and DNS Configuration

Hostname Configuration

☐ Automatically set via DHCP

☒ Manually specify:

DNS Configuration

☒ Automatically set via DHCP

☐ Manually specify:

DNS Server 1:

DNS Server 2:

DNS Server 3:

Select Time Zone

Please select the geographical area that your XenServer Host is in:

Antarctica ↑

Arctic

Asia

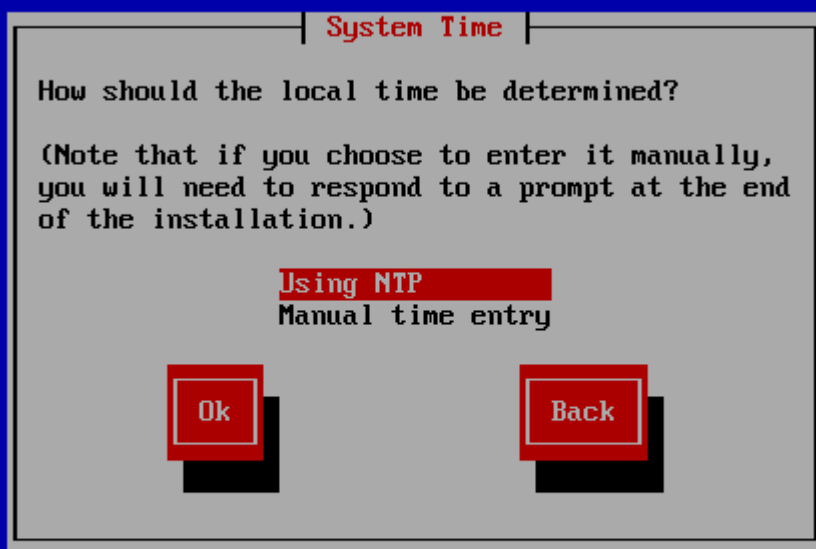

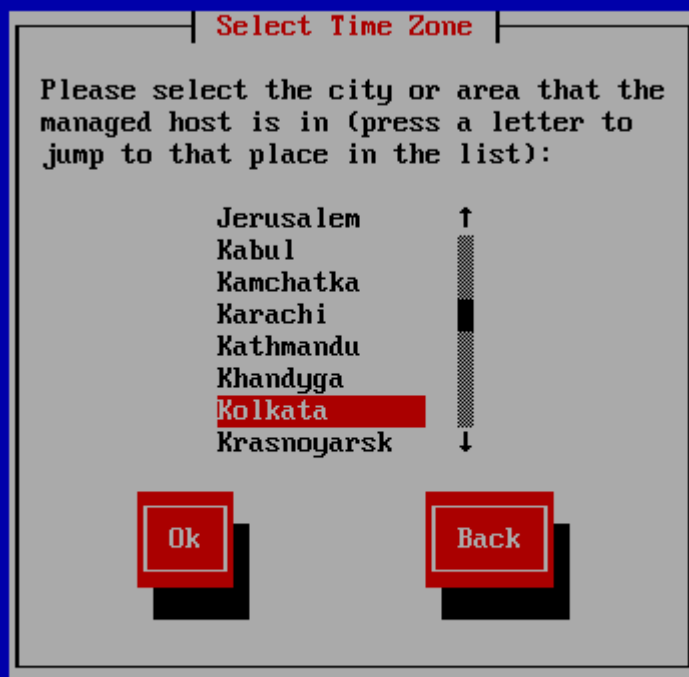

Atlantic

Australia

Etc

Europe

Indian ↓

NTP Configuration

Please specify details of the NTP servers you wish to use (e.g. pool.ntp.org)?

☒ NTP is configured by my DHCP server

NTP Server 1:

NTP Server 2:

NTP Server 3:

Ok

Back

Confirm Installation

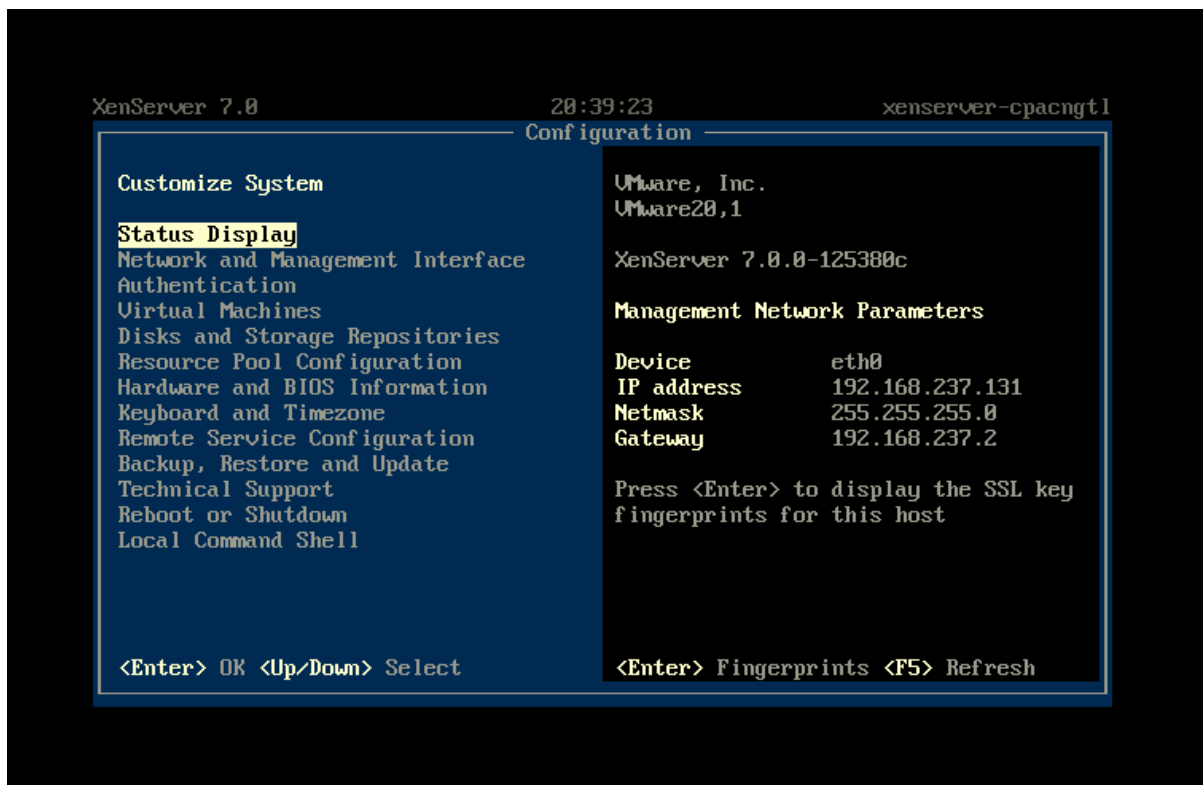

We have collected all the information required to install XenServer.

Please confirm you wish to proceed: all data on disk nme0n1 will be destroyed!

Install XenServer

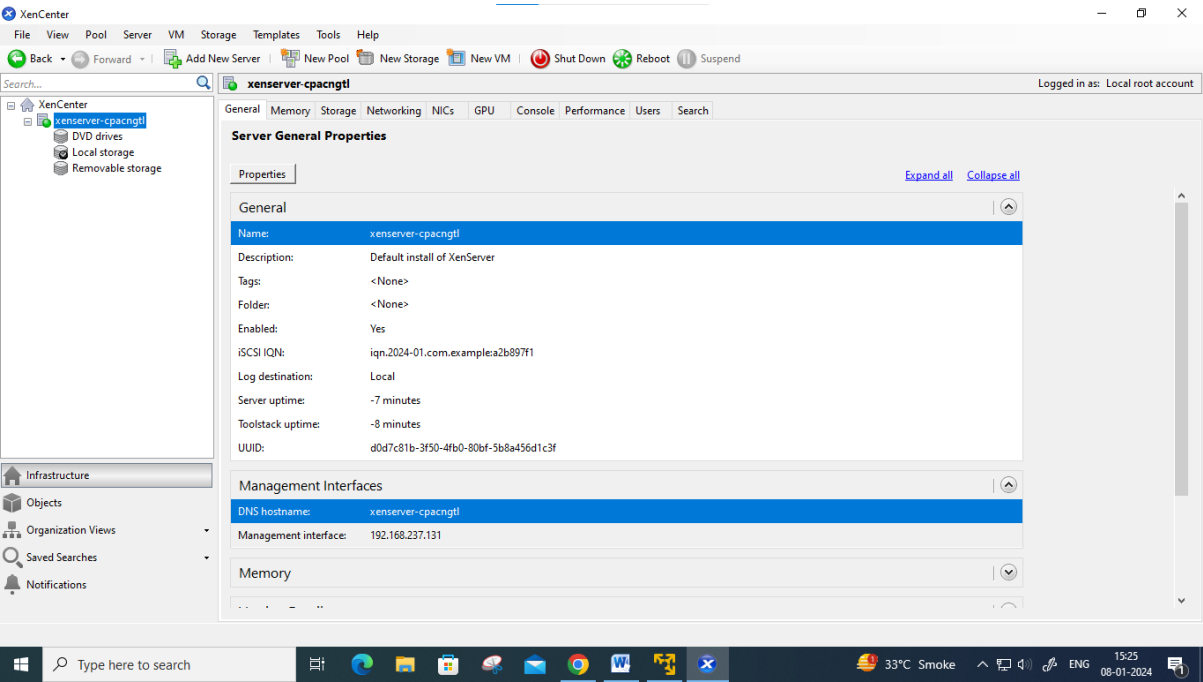

Back

Go to xenserver and use ip address 192.168.237.131

Succesfully conneted to the same IP:

Post Lab Questions

1. On a particular server, within each virtual machine:

- a. You can run any version of Windows without regard for the version(s) running in the other virtual machines.
- b. The versions of Windows must be no more than one release level apart
- c. The versions of Windows must be the exactly same.**

2. On a particular server:

- a. If you need to reboot one virtual machine, you have to first reboot the physical server, the individual virtual machines and then reboot automatically when the physical-machine reboot is finished.
- b. If you reboot one virtual machine, all the other virtual machines reboot at the same time.
- c. You can reboot a virtual machine without it having any effect on the other virtual machines.**

3. When choosing which applications or databases to place on one physical machine

(using a virtual machine for each application), it is best to:

- a. Choose a mixture of applications and databases with different workloads.
- b. Keep all the heavy-workload application/databases together and all the light-workload applications and databases together.**

4. Introduction of server virtualization in a data center:

- a. Will make the introduction of Storage –Area Network (SAN) absolutely necessary.
- b. Will make the introduction of Storage –Area Network (SAN) desirable.**
- c. Will not materially change storage requirements.

5. In a virtualized- server environment, compared with a traditional server environment:

- a. It is easier to keep track of software licensing.**
- b. Tracking software licensing is neither materially easier nor harder.
- c. It is significantly harder to keep track of software licensing.

6. The VM Kernel can't boot it by itself, so that it takes the help of the 3rd party operating system.

- a. True
- b. False**

7. The hypervisor acts like a traffic cop, directing hardware access and coordinating requests from the guest operating systems.

- a. True**
- b. False

8. XEN hypervisor does not support VM migration.

- a. True
- b. False**

9. XEN hypervisor works on multiple cloud platforms.

- a. True**
- b. False

Outcomes:

CO1: Understand Virtualization.

Conclusion:

We can conclude that we have learnt about Virtualization using VMware workstation and XEN Server-Client installation.
